No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score

JSequence 86, Application US/08137117D

Patent No. 5795965

GENERAL INFORMATION:

APPLICANT: SATO, KOA

APPLICANT: SATO, KOA

APPLICANT: BENDIG, Wary

APPLICANT: BENDIG, Wary

APPLICANT: SATO, KOA

TITLE OF INVENTION: INTERLEURIN-6 RECEPTOR

NUMBER OF SEQUENCES: 158

CORRESPONDENCE ADDRESS:

ADDRESSEE: Poley & Lardner

STATES: JOO

STATES: JOOO K Street, N.W., Suite 500

CITY: Washington

STATES: D.C.

COUNTRY: USA

ZIP: 20007-5109

COMPUTER READABLE FORM:

MEDIUM TYPE: Plopy disk

COMPUTER READABLE FORM:

MEDIUM TYPE: Plopy disk

COMPUTER: DEAPLOATION DATA:

APPLICATION NUMBER: US-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US-08/137,117D

FILING DATE: 20-DEC-1993

CLASSIFICATION DATA:

APPLICATION NUMBER: US-08/137,117D

FILING DATE: 24-APR-1992

PRIOR APPLICATION DATA:

APPLICATION NUMBER: US-08/137,117D

PRICH APPLICATION DATA:

APPLICATION NUMBER: 39-5476

FILING DATE: 25-APR-1992

PRIOR APPLICATION DATA:

APPLICATION NUMBER: 25,258

TREERENCE/DOCKET NUMBER: 53466/126/AAOK

TELEPHONE: (202)672-5399

TELEX: 904136

INFORMATION FOR SEQ ID NO: 86:

ESCUENCE CHARACTER ISTICS:

LENGTH: 130 amino acids

TIPE: amino acids

CX8X777X8X7X8X8X8X8X8X8X New anti-interferon alpha monoclonal antibody, 9F3, useful for treating autoimmune diseases e.g. insulin-dependent diabetes mellitus, systemic lupus erythematosus and autoimmune thyroiditis.

Disclosure; Page 97; 100pp; English.

The present invention relates to novel anti-interferon alpha (IFNalpha)

Antibodies (Ab) comprising a humanised variable region specifically binding to a varicella zoster virus (VZV) can be used to treat or prevent VZV infection. They may optionally be attached to a therapeutic agent. They may also be used, when labelled, to detect VZV particles and infected cells in blood; for the removal/ neutralisation of infectious VZV in blood; for the selection/ isolation of human monoclonal Abs and for the design of (non-) peptide mimetics with similar diagnostic and therapeutic uses. The variable region CDR portion is derived from murine Ab 206 and the heavy and light chain variable region frameworks are NEWM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         monoclonal antibody, 9F3 which binds to and neutralises a biological activity of IFN-alpha subtypes. The anti-IFNalpha monoclonal antibodies of the invention are useful for treating autoimmune diseases such as insulin-dependent diabetes mellitus, systemic lupus erythematosus and autoimmune thyroiditis. They are useful as reagents in diagnostic assays for IFN-alpha expression, for the affinity purification of various IFN-alpha expression, for the affinity purification of various in the detection of IFN-alpha in diagnostic assay methods. Sequences of the invention are also useful in antibody therapy. The present sequence is anti-luman IFNalpha monoclonal antibody 9F3 version 13 (V13) light chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antibody; varicella zoster virus; Ab; VSV; treatment; prevention; infection; detection; isolation; monoclonal antibody; MAb; mimetic; humanised; murine; heavy chain; light chain; variable region; CDR; NEWM;

                                                                                                                                                                                                                                                                                                                                                                                                                        CC complex with an anti-CD45 antibody or its antigen-binding fragment, and cches tructure coordinates of such a crystal. In particular, the crystal comprises human CD145 (AAM49202) and a humanised version of the murine commoncional antibody 5c8 (husce; AAM49202) and a humanised version of the murine commoncional antibody 5c8 (husce; AAM49202). CD145, also known as CC CD401, gp39; T-BAM, 5c8 antigen, CD40CR and TRAP) is a 32 kD type II CC membrane glycoprotein which is transiently expressed on activated T CC cells. It interacts with CD40 which is expressed on mature B cells, CC macrophages, dendritic cells, fibroblasts and activated endothelial CC cells. This CD40:CD145 interaction is required for T cell-dependent CC antibody responses, type I T-helper cell responses, and nitric oxide (No) CC production by macrophages, and disruption of the CD40:CD145 interaction via the use of an anti-CD145 antibody has been shown to reduce the cof the invention can be used to determine the three dimensional structure of the CD145 anti-CD145 antibody complex, and thereby provide information CC about this interaction which may be of use in designing non-antibody CC 19145 agonists and antagonists which modulate the CD40:CD145 interaction. CC Such compounds may be used in the treatment of an unwanted immune cC asthma, chronic obstructive pulmonary disease (no antibody because, treat systemic consentive, pulmonary disease (no compounds may be used in the treatment of an unwanted immune cC asthma, chronic obstructive pulmonary disease (no compounds may be used in the treatment of an unwanted immune cC asthma, chronic obstructive pulmonary disease (no compounds may be used to a therapsutic agent, rejection of a C cantibody, and inhibitor response to a therapsutic spent; respectively, the medical consense, lumpus neuritis, cc sendance of a consense of a co

                                                                                                                                                                                                                                                                                                                                                                  (MAb) light chain variable region, useful in medicine, pharmacology and biochemistry. The isotype of a MAb secreted by the human/human hybridoma HT was determined to be mu and kappa. Human MAb was purified, and the antigen recognised by human MAb CLN"-IgM identified by western blotting

These are encoded by the cDNA clones given in AAV61280 and AAV61281. HuDreg 55 can be used to prevent multiple organ failure associated with polytrauma and for the prevention of acute organ damage associated with extracorporeal blood circulation. The antibody inhibits interaction between the carbohydrate-recognising domain of the selectin and the corresponding cell surface receptor. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a dual-specific ligand (I) comprising:

(C) (a) a first single immunoglobulin variable domain with a binding

(C) specificity to a first antigen or epitope; and (b) a second complementary

(C) immunoglobulin single variable domain with a binding activity to a second

(C) complementary to a second domain single watiable domain with a binding activity to a second

(C) complementary, and

(C) complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel dual-specific ligand comprising a first C immunoglobulin single variable domain having a binding specificity to a C first epitope or antigen and a second complementary immunoglobulin single variable domain having a binding specificity to a CC first epitope or antigen and a second complementary immunoglobulin single CC variable domain having a binding activity to a second epitope or antigen. CC antirheumatic, antiarthritic, antiasthmatic, antiallergic, antibacterial, cC virucide, immunosuppressive, antidiabetic, neuroprotective, muscular and CC dermatological activities and may be useful in gene therapy, ligand CC binding assays or for diagnosing, preventing or treating a disease CC selected from an inflammatory disease such as rheumatoid arthritis, CC asthma or Crohn's disease, an allergic hypersensitivity, a bacterial or viral infection, an autoimmuné disorder such as type I diabetes, multiple sclerosis, myasthenia gravis or systemic lupus erythematosus or cancer. The current sequence is that of a single domain antibody (dab)-related control of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

This invention describes a novel humanized anti-Pas antibody-like CC molecule (I) that, induces apoptosis in cells with an abnormal Fas/Fas CC ligand system, by binding to Fas on the cell surface, and prevents CC apoptosis in cells with a normal system, by inhibiting binding between CC Pas and its ligand. The products of the invention have anti-inflammatory, CC anti-nemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, CC antirheumatic, nephrotropic, anti-infertility, neuroprotective, CC diseases associated with the Fas/Fas ligand system, especially systemic CC lugus erythematosus, Hashimoto disease, rheumatoid arthritis, graft CC versus host disease, Sjorgen's syndrome, pernicious or hypoplastic CC unti-percent disease, scleroderma, Goodpasture syndrome, Crohn's CC disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, CC disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, CC dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, CC cardiomyopathy, glomerulomephritis, hepatitis (filminant, chronic, viral (B, C or D) or alcoholic), and transplant rejection. (I) selectively cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they mimic contended in the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a humanised anti-Fas antibody light chain construct designated Leu 1 cc which is described in the method of the invention
                                                                                                                                                                                                                                                                                           Query Match

The agent has immunosuppressive and antiallergic activity and is used for preventing and treating autoimmune diseases,

CC molecule (1) that, induces apoptosis in cells with an abnormal Fas/Fas CC ligand system, by binding to Pas on the cell surface, and prevents CC apoptosis in cells with a normal system, by inhibiting binding between CC Pas and its ligand. The products of the invention have anti-inflammatory, CC anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, cimmunomodulatory, dermatological, immunosuppressive, thyromimetic, CC antiarteriosclerotic, cardiant and hepatropic activity. (1) induce approved by binding to cell surface Pas or inhibit it by competitive CC inhibition of ligand binding. (1) are used to treat and/or prevent CC diseases associated with the Pas/Fas ligand system, especially systemic CC upus erythematosus, Hashimoto disease, rheumatoid arthritis, graft CC versus host disease, soleroderma, germicious or hypoplastic CC anemia, Addison's disease, soleroderma, Goodpasture syndrome, Crohn's Cdisease, autoimmune hemolytic anemia, sterility, mysathenia gravis, CC disease, autoimmune hemolytic anemia, sterility, mysathenia gravis, CC ardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral CC (B, C or D) or alcoholic), and transplant rejection. (1) selectively cills. They bind to both human and murine Pas, so can be evaluated in murine disease models. (1) act on the active site of Pas, i.e. they mimic CC inducing a human anti-murine antibody response. This sequence represents ca humanised anti-Pas antibody light chain construct designated Leu 3 which is described in the method of the invention

The agent has immunosuppressive and antiallergic activity and is used for preventing and treating autoimmune diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-145113/19.

                                                                                                                                                                                                                                                                                                                                                                                                                                               CC of an antidiotypic antibody (AD2) or another peptide which: (a) encode a region of specifically binds to the binding size of an antibody (AD1) or an antigen CC binding molecule; and (b) immunologically mimics the initial antigen. The cepitope is partially or completely conformation-dependent, and has an ciden. (I) is used in the form of linear or circular naked DNA and/or caids. (I) is used in the form of linear or circular naked DNA and/or cident. (I) a corresponding vaccine (V2) against antigens which care not proteins or peptides, as defined above but which have epitopes which show an immunogenic structure; (2) preparing (V1) and (V2); (3) CC which show an immunogenic structure; (2) preparing (V1) and (V2); (3) CC which show an immunogenic structure; (2) preparing (V1) and (V2); (3) CC which show an immunogenic structure; (2) preparing (V1) and (V2); (3) CC which show an immunogenic structure; (2) preparing (V1) and (V2); (3) CC which show an immunogenic structure; (2) preparing (V1) and (V2); (3) CC which show an induction structure; (3) preparing (V1) and (V2); (3) CC which show an induction of structure; (4) MUC1-conformation epitope confined the specification; (5) antidotypic antibody fragments against the TF confirmation one of 24 approximately 200 residue amino acid sequences, all fully defined in the specification; (6) TF carearbohydrate epitope mimetics conformation; and (7) DNA sequences encoding the fragments and confirmed in feetined in (3, 4, 5, or 6). (V1) and (V2) are used to treat cancer, and infectious diseases, e.g. caused by prions, viruses, bacteria and parasites. The vaccines are effective in cases where vaccination has confirmed in the specification and confirmed in cases where vaccination has previously not been possible
                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel vaccine (V1) against conformation-dependent antigens (CDA) comprising DNA (I) and/or an antibody, or peptide which immunologically inmitates CDA, is new. (I) encodes a rof an antiidiotypic antibody (Ab2) or another peptide which: (a) specifically binds to the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of an antibody (Ab1) or an analysis of the binding site of a
                                                                                                                                                                                                                                                                                                                                                                                        Sequence 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 5-9; 36pp; German.

The antibody of the invention preferably contains the sequence represented by AAW13912 in the complementarity determining region-1 (CDR-1) of the heavy chain variable region. The antibody of the invention also contains the sequence represented by AAW13913 in the CDR-3 of the light chain variable region. The antibody is capable of binding to addr type hepatitis B (HB) virus antigen. A human anti-HB virus monoclonal antibody preparation which is highly safe and is effective to adr type HB virus can be provided, using

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence is that of the variable light chain of e426. It was used as part of a method to improve the affinity of anti-IgE antibodies such as e26 and e27. The e26 and e27 antibodies can be used for reducing or preventing IgE mediated production of histamine in a mammal. They can be used for treating a disorder mediated by IgE such as hypersensitivity, atopic allergy, asthma, allergic rhinitis, conjunctivitis, hay fever, eczema, anaphylactic shock and urticaria. The antibodies can also be used for affinity purification, detection and diagnosis
                                                                                                                                                                                             Variable light chain; IgB; antibody; anti-IgB; reduction; prevention; histamine; production; hypersensitivity; allergen; anaphylaxis; atopic allergy; asthma; allergic rhinitis; conjunctivitis; hay fever; eczema; anaphylactic shock; urticaria.

It was used as part of a method to improve the affinity of anti-IgE antibodies such as e26 and e27. The e26 and e27 antibodies can be used for reducing or preventing IgE mediated production of histamine in a mammal. They can be used for treating a disorder mediated by IgE such as hypersensitivity, atopic allergy, asthma, allergic rhinitis, conjunctivitis, hay fever, eczema, anaphylactic shock and urticaria. The antibodies can also be used for affinity purification, detection and diagnosis

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B B
